1. Solution Overview

‘Enterprise Resource Planning (ERP) is the process of integrating all the business functions and processes in an organization to streamline operations and increase efficiency and productivity’

Perfect Enterprise Resource Planning System (PERPS) is a comprehensive Enterprise Resource Planning (ERP) solution that performs all the operations of an enterprise business management system. It is a multi-language (Arabic & English) application that includes Accounting, Financial, Inventory, Sales, Purchasing, Fixed Assets, Budgeting, and Management tools. It enables complete and efficient control of all your business processes and operations and significantly improves overall performance. The system can be tailored specifically for your needs, and can be deployed either as a web-based application or as a desktop application.

Key Strengths

Simple

Perfect ERP will adapt to your business without changing the way you conduct business. Powerful technology used to build the product ensures your usage experience is simple. *Perfect* ERP is easy to learn, configure and use.

Affordable

Perfect ERP is priced to ensure technology reaches you without compromising on the quality. **ASD** has remained a market leader for its affordable cost of ownership and negligible maintenance for businesses of all sizes. Whether you are a small, medium or large enterprise, *Perfect* ERP addresses most of your business needs.

Highly Customizable

While many of our customers have 100% of their needs fully met out-of-the-box, *Perfect* ERP can be extended for special needs. Customization of *Perfect* ERP can address specific requirements to meet your unique business needs. Extent of customization may vary from changes of simple data capture forms and report formats to complex functional and features changes.

Features & Functionalities

User-Friendly Interface

Perfect ERP adapts a unified look and feel in all its windows and functions and has a very user-friendly interface. In this familiar environment, users can freely and easily navigate between windows and pages.

Multi Languages

Bilingual support in *Perfect* ERP is a standard. In addition, fields can be locked to accept data in only one of the languages if desired. A certain field can also accept any of the two languages. It can be any language

Full Support to Different Operating Systems and Databases

Perfect ERP operates under all windows versions; from Windows 2000 to Windows 10 as well as Mac OS and Linux. It also supports today's most advanced databases; such as Microsoft SQL Server, Oracle, Derby, and MySQL.

Flexible Open Design

Perfect ERP is designed as an open system that adapts to the diverse needs of organizations and companies. This design ensures ultimate flexibility, adaptability and customization. *Perfect* ERP does not impose rigid rules on its users; in contrast, it is designed to be adapted to the users' requirements.

Comprehensive Accounts Management

This is the most popularly used feature in *Perfect* ERP since the inception of the product. Powerful accounting capabilities in *Perfect* ERP includes simple bookkeeping, accounts receivable, accounts payable, bank reconciliation, purchase order & invoices, cheques & invoice printing, profit & loss account, balance sheet, ratio analysis etc.

Easy Inventory Management

Item wise inventory management, stock groups, multiple units of measure, stock aging report and analysis; multiple price list with date and expiration management; daily stock status and reports etc. are some of very powerful inventory features in **ASD Perfect** ERP.

Simple Payroll & HR Management

Simple payroll processes to compute salaries and generate pay slips. Supports the loans; maintains attendance details; employee records, contact details and contract conditions etc.

Remote Access

ASD Perfect ERP is completely web-enabled. This means that you can access your business data from any location. You can enable your travelling sales staff to check inventory status before booking an order, enable your Chartered Accountant to audit your business and provide professional advice sitting from his office and more. Your business does not have to wait while you are travelling, at home, etc.

Multi-company / Branch

ASD Perfect ERP provides facility for creating and maintaining any number of companies / branches and can manage these companies / branches separately. It also allows you to group companies / branches and hence provides a consolidated report for the companies grouped.

Multi-period

A company can have any number of financial periods by mentioning the financial year beginning at the time of creating a company in **ASD**. Transaction can be moved between multiple financial periods by selecting a period as per the business requirement.

Multi-cost & Profit Centres

Allocate funds to different cost / profit centres; compare one cost centre with another, extract management reports regarding performing and non performing cost/ profit centres.

Integration and Consistency

Perfect ERP can be easily integrated with other **ASD** products as well as third party software. It requires little effort to take out or add modules to the system. Furthermore, *Perfect ERP* is robust and consistent in all its functionalities and features, thus it can be integrated with Billing system, and Customer Care system or any other system.

Decision Making Information at Your Fingertips

Perfect ERP helps managers to make the right business decisions and saves time and effort. The application assists decision-making by displaying all relevant details. For example, it displays the available quantity of products, client balances and credit limits... etc. It also allows the user to add notes and other relevant information.

Highly Secured System

Perfect ERP is a highly secured system. The access rights of each and every user are clearly defined in terms of the functions and procedures he / she can execute. In addition, sensitive records can be assigned to certain users or user groups to reduce unauthorized access risk. *Perfect ERP* also enables management to issue audit trails that will include records of each users' activities in the system.

Many Other Features

Perfect ERP has several other features that make users life much easier, such as:

- Report archiving and export facility to reduce paper trails and ease information exchange.
- Full barcode support, including printing barcodes in various formats and using different printers.
- Supports all Point of Sale peripherals.
- Information exchange with hand held computers for stocktaking.
- Information exchange with electronic time attendance systems.

International Accounting Standards (IAS):

Perfect ERP is developed based on the international accounting standards.

Posting and closing period:

The package enables financial managers to post vouchers and to close periods.

Serial numbers and Bar Code Generators:

It uses and generates bar codes for stock and assets. It utilizes serial numbers also for stocks and Assets.

System availability:

Perfect ERP package is available 24 hours 7 days a week and 360 days a year.

This is due to the fact that most maintenance and support operations can be done while the system is running like backup operation. Further more, there is no need to stop the system in order to get any report.

Security:

The Systems Security is obtained in multi-level:

- Network infrastructure: Good designed network with firewalls and proper masks to separate users and groups.
- RDBMS security capabilities: the application uses *MS SQL Server RDBMS*, or and DBMS as database engine that is both robust and secure.
- Application Level: All systems have the following levels of security:

- Screen (Form) level: administrator can give a privilege on a specific screen or report to a specific user or a group of users.
- View/Insert/Update/Delete in the same screen.
- Record level for specific customized screens and reports.
- Field level for specific customized screens and reports.
- Audit Trail: To increase security, all transactions/changes in the system along with the user, terminal, date and time, and affected table/column will be recorded in a special schema table that allows for query and reporting.
- Security log can be accessible at any time through a report request or on-line inquiry, which is contained all inserted, updated and deleted data.

Full multi-currency:

The system allows the user to manage unlimited number of different currencies, keeping track of account balances, customer, supplier statements and financial reporting in the standard (base) currency as well as any other desired currency. Thus, the exchange currencies are eliminated, and in some cases, the system can effectively reconsolidate them.

Help & Manuals:

The package has a User manual (about 500 pages) and Technical manual. Both are available as a soft and hard copies.

Bilingual:

The package is bilingual (English /Arabic). This enables the user to issue vouchers and printing reports in any desired language.

Web enabled:

Single Sign In (SSI):

High Quality Support

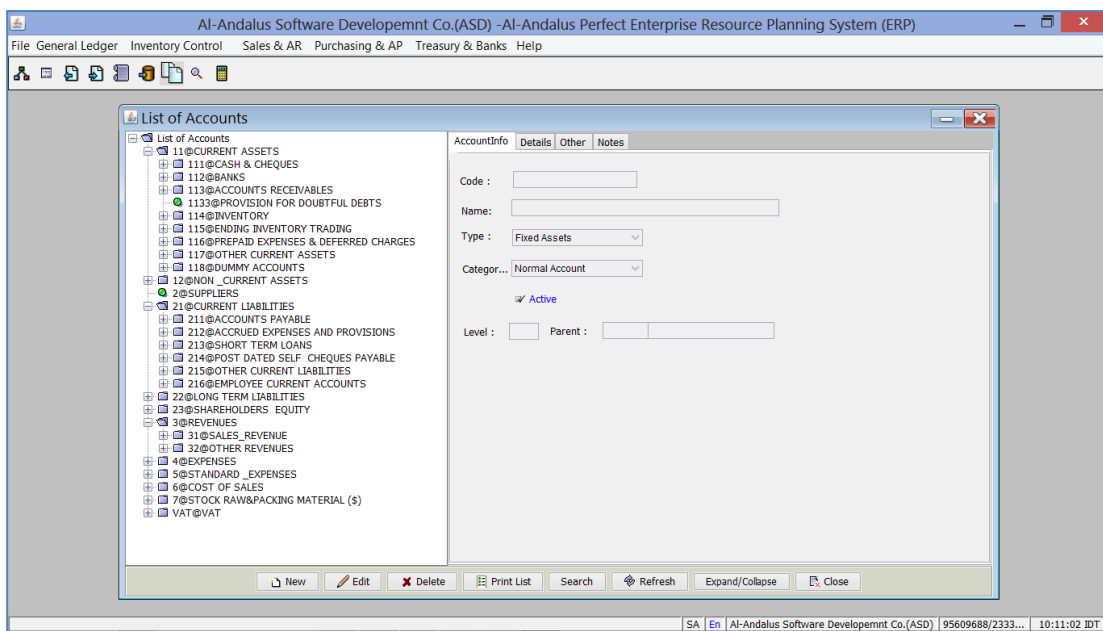

Last but not least, **ASD** considers technical support services an integral part of all its offerings. Our qualified engineers provide onsite and electronic technical support services, in addition to training, consulting and implementation services.

Technology:

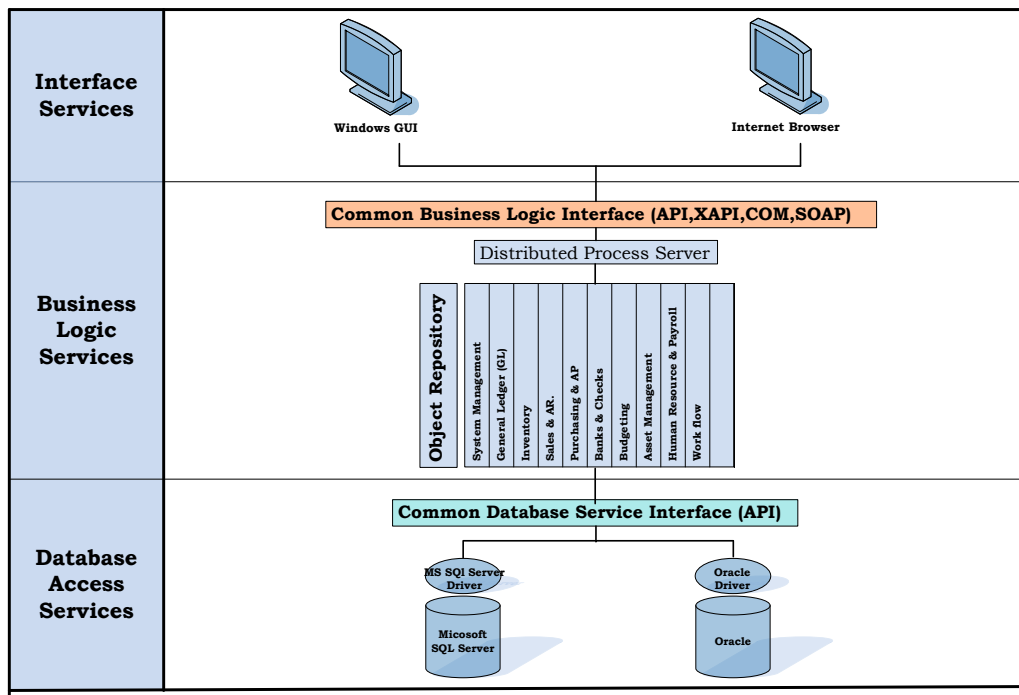

- Perfect ERP system had three-tier architecture. We used **JAVA** as a development tools for the presentation layer (User Interface, Front End), any Relational DBMS (example **Oracle 10** or later, MS SQL Server 7 or Later) for the database layer (Back End), and Crystal Report (version 7 or later) or Jasper Report (Free report engine for Java XML) as a report engine.
- Perfect ERP is built in a way that uses Open connectivity methodology. Thus, it is easily connected (integrated) with different systems.
- All output (report and voucher) is generated in hard-copy, soft-copy and on-screen printing. Furthermore, outputs can be sent directly throw emails and web page (HTML format).
- Uses any relational database (RDBMS) like Oracle, SQL server, Access Database, Sybase and Informix Database.
- Platform independent: Perfect ERP can run on any operating system such as UNIX, Linux, Microsoft Windows (XP, 7, 8) and OS2.
- Jasper Report (Free report engine for Java XML) as a report engine.

2. Main Modules:

The following sections briefly summarize Perfect ERP main related modules:

ASD (Perfect) ERP Architecture

2.1. General Ledger (GL):

The General Ledger (GL) module is the core of the ERP package. The purpose of this module is to capture data transfers from the sales and accounts receivables, purchase and accounts payables, and inventory modules and journal entries in order to provide a general ledger, trial balance and financial statements (composed of balance sheet, income statement, and statement of cash flows) for the firm. It is the source of the financial statements generated by ASD system. The basic building blocks are:

Cur.	Cheques Amt	Cust/Sup	User	comments	CurRate
136271.0000 NIS	0.0000		SAHAR	By Cust.chques Depos...	1.0000

1) Chart of Accounts:

- It is an accounting sigma with flexible options.
- It is in a hierarchical structure with flexible coding configurations to allow for reporting of individual as well as aggregate revenues, expenditures,...etc.
- Distinguishes revenue, assets, expenditures and liability accounts.
- Unlimited number of levels, and accounts.
- Flexible coding schema (alphanumeric 30 char).
- Cost centres related.
- It can be printed completely or partial list.

2) Cost Centres:

- The cost centre or profit centre is the entity upon which cost / profit analysis is performed (e.g. department in a company). Cost centres are divided into sub cost centres that allow a finer level of analysis. As an example, the cost centre could be a section in a department.
- After cost centres are defined, they can be combined with accounts, along with transactions to form chart of accounts and journal transactions.

3) Journal entries:

- Journal can be created for prior and future periods (date) and in multi-currency.
- It allows on-line and batch entries with unlimited numbers of accounts (entries) in each voucher and on-line balancing edit.
- It provides multiple lines of description per journal entry and voucher. In addition to multiple lines of special pre-defined description (remarks) per voucher.
- Allows Cost centre entry.
- It may include VAT.

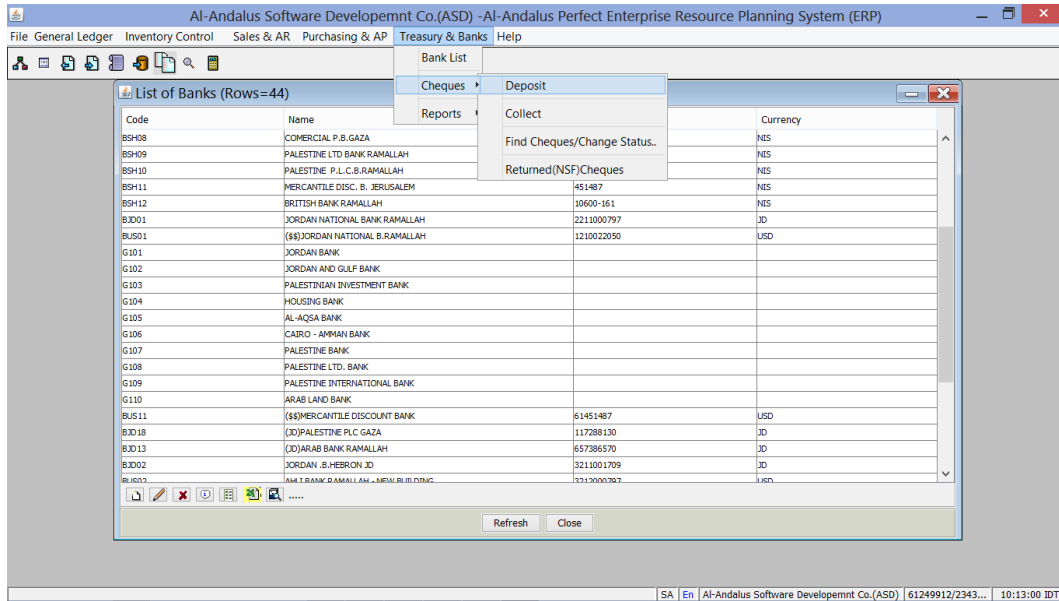

4) Reports:

- Trial Balance.
- Income and expense reports.
- Cash flow.
- Detailed and summary balance sheets.
- Accounts Budget versus actual.
- Journal Transactions.
- Chart of accounts.
- VAT reports
- Currencies History Report
- Ledger Reports.
- Cost Centres Reports.
- End year reports.

All these reports can be produced in base (main) currency and any foreign currency (multi-currency reporting) and at any time i.e. monthly, daily, yearly... e.t.c.

2.2. Treasury (Cash, Banks and Cheques):

The purpose of the bank module is to capture all banks activity including check (current and post-dated checks) and cash deposit, check collections, and bank statement. The bank module integrated with purchases and AP, sales and AR, general ledger. Essentially, it contains the followings:

- Journal cash deposit.
- Check deposit.
- Check collection.
- Bank reconciliation in semi-manual fashion.
- Archiving bank reconciliations for future reference.
- Changing check status (i.e. cancelled, returned, e.t.c.).
- Check printing and Manual Checks.
- Deals with post dated and return cheques.
- Reports:
- Self-checks.
- Customer post-dated check statement of account.
- Customer checks (posted-dated or current and returned checks).
- Bank reconciliation.

2.3. Inventory Control:

This module is a business-leading inventory control, distribution, items management and manufacturing software solution for small to large-sized companies. This product offers a broad selection of feature-rich Functions that empower customers with the ability to manage and help their businesses grow more effectively.

Precise control and safeguarding of inventory are an essential task for a successful, well-organized company; businesses require timely and accurate information on inventory location, movement, history and valuation.

It provides data pertaining to the receipt of goods, the movement of goods within or between locations, the sale, removal or other disposition of goods, and the precise valuation and status of goods remaining in inventory at any point in time down to the bin status and serial number batches & lots and expiration dates remaining in stock.

The aim of the inventory module is to control all stock transactions and quantities. This includes the raw materials, sales, services, and manufactured materials. It is integrated with budgeting, fixed assets, purchasing & accounts payables and general ledger. Actually, it supports the followings:

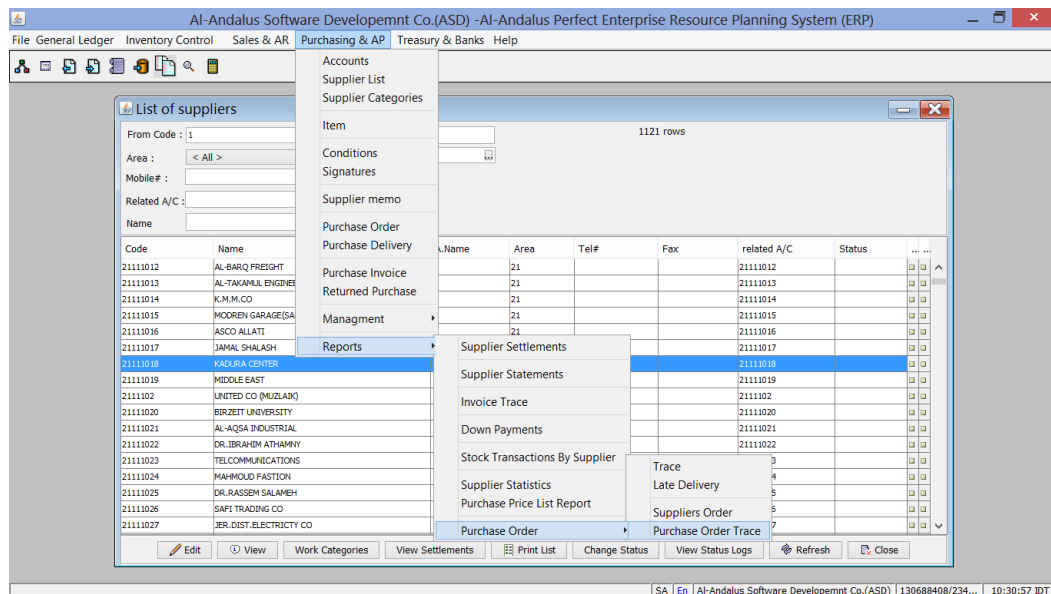

- Multi-warehousing.
- Flexible item card, with segments for group and subgroup.
- Item serial numbers.
- Utilizing Batches & lots (expire dates).
- Items categories (example Fixed assets and stationeries ...e.t.c.)
- Uses Bar code.
- Multiple units of measurements.
- Tracking items by serial number, lot (batch) number, item number and shelf number.
- Support physical counts.
- Using **perpetual** module with Average Weighted price, FIFO.
- Stock Keeper authentications.
- Minimum quantity (re-order point) for each warehouse.
- Calculate inventory value using average cost, minimum cost, and FIFO.
- Selling prices and cost prices list.
- Storekeeper authentication issues.
- Contains the following vouchers:
 1. Stock In.
 2. Stock Out.
 3. Stock Transfer (between warehouses).
 4. Stock Distribution (for stationeries between departments and branches).

5. Stock Assembling.

- Reports such as:
 - Item quantities (by warehouse).
 - Item transactions (history).
 - Stock on Hand.
 - Inter-warehouse transaction report.
 - Branches' Quantities.
 - Item In / Out.
 - Pricing.
 - Total sold quantities.
 - Unavailable stock.
 - Free stock (i.e., bonus).
 - Stock Evaluation.

2.4. Purchasing & Accounts Payables (P&AP):

This module captures all purchases, purchase returns, and suppliers of the firm. It is used for purchasing of inventory items, or services. Typically, it automatically interfaced with General Ledger, Budgeting, fixed assets and Inventory. On the other hand, the payments module deals with all payment operations in the firm including cash and / or checks. In addition to that, vouchers in this module automatically update the accounts payable subsidiary ledger and suppliers files.

Mainly have the following vouchers:

1. Supplier memo (supplier Invoice).
2. Purchase Invoice.
3. Payment.
4. Down payment.
5. Purchase Request.
6. Purchase Order.
7. Purchase receipt voucher.
8. Returned purchase invoice.
9. Debit note.

For instance, it supports the following:

- Follow up the purchase request.
- Follow up the purchase order.

- Purchase Management.
- Suppliers' categories.
- Supplier settlements.
- Provide the ability to match the purchase orders with purchase invoices and receipts.
- Trace outstanding purchase orders.
- Follow up the purchase invoice.
- Outstanding purchase request and orders.
- Purchase order tracing.
- Purchase management reports.
- Inquires of purchase orders showing quantity ordered, received, invoiced, and cancelled.
- Vendor history.
- Supplier statement of account.
- Non-moving suppliers' accounts payables.
- Bank transfer to suppliers
- Item history.

Payment voucher:

- Handles Payments in multi-currency, cash, and /or checks.
- Types of payment: *Normal*
Down Payment.
- Payment may be done for purchase invoice, purchase order and supplier invoice.
- Automatically interfaced with bank, general ledger, and purchases modules.
- Allows Cost centre entry.
- The payment voucher may include VAT.
- Payments can be created for prior and future periods (date) and in multi-currency.
- It allows on-line and batch entries with unlimited numbers of accounts (entries) in each voucher and on-line balancing edit.
- It provides multiple lines of description per payment entry and voucher. In addition to multiple lines of special pre-defined description (remarks) per voucher.

2.5. Sales & Accounts Receivables (S & AR):

The purpose of this module is to capture all cash and credit sales invoice, credit notes, sales returns and receipt voucher. The vouchers of this module automatically update the accounts receivable subsidiary ledger and customers files. Thus, it is integrated with general ledger, inventory, and banks modules.

Clearly, it manages the followings:

- It handles receipts in multi-currency.
- Cash receipt and checks.
- Receipt voucher provides Multiple lines of description per receipt entry and voucher. In addition to multiple lines of special pre-defined description (remarks) per voucher.
- On-line inventory updates.
- Total Revenue, commissions, outstanding balances, and collections.
- Revenue analysis reports.
- Customers and customers aging.
- Sales mark-up reports on items.
- Customers' accounts receivable statement of account.
- Customers' accounts receivable outstanding balance.
- Customers' post-dated-checks statement of account.
- Non-moving customer accounts receivables.

- Price points list.
- Revenue per Item/Price, per Warehouse, per Customer, per Region, Salesman Balances, Salesman Sales/Collections/Commissions, Sales Performa/Orders/Deliveries.
- Mainly has the following vouchers:
 - Receipt voucher (cash / checks).
 - Manual Invoice.
 - Invoice (cash / debit).
 - Sales delivery.
 - Price list.
 - Sales returns.
 - Credit Note.

2.6. Fixed Assets:

Fixed assets module allows the user to maintain comprehensive and historical asset information. Specific information depending on the asset type, location, and department is possible as well various methods of depreciation. Automatic fixed assets accounting entries will be generated to the General Ledger, including provisional depreciation and their reversals. It is integrated with general ledger, budgeting, inventory, and purchasing & accounts payables modules.

Main Features:

- Uses straight-line Depreciation method.
- Uses bar code reader for assets evaluation.
- Hieratical asset types and classes.
- Hieratical assets locations.
- Utilizing assets label code and bar code.
- Monthly or yearly depreciation methods.
- Masters assets classes, types, locations, and transactions.
- Assets Disposal and additions.
- Transfer of assets.

- Deprecations and addition depreciations.
- Assets Transactions posting.
- Batch depreciation.
- Storing asset related information such as supplier name, code, contact information, serial number, and model and product number.
- Spread sheet appearance.
- Fixed Assets Reports and Inquires:
 - Fixed Assets by class and types.
 - Assets by Location.
 - Assets Depreciation Schedule.
 - Assets Details Report.
 - Assets Journal & Asset capitalization.
 - Assets History
 - Assets disposals.
 - Assets Balances and summary.
 - Assets Movements, Assets Additional.

2.7. Reporting Module and Business Intelligence (BI)

In order to achieve project objectives, there is a need for a reporting dynamic module. Therefore, we devoted this section to explain our point view about reporting and systems outputs.

We are proposing two complement reporting tools and methods:

- 1- The ERP existing reports (Built-in reports and customizing reports).
- 2- Dynamic reporting Analytical tool. It is a Business Intelligence (BI) and Powerful analytical tools

What is BI?

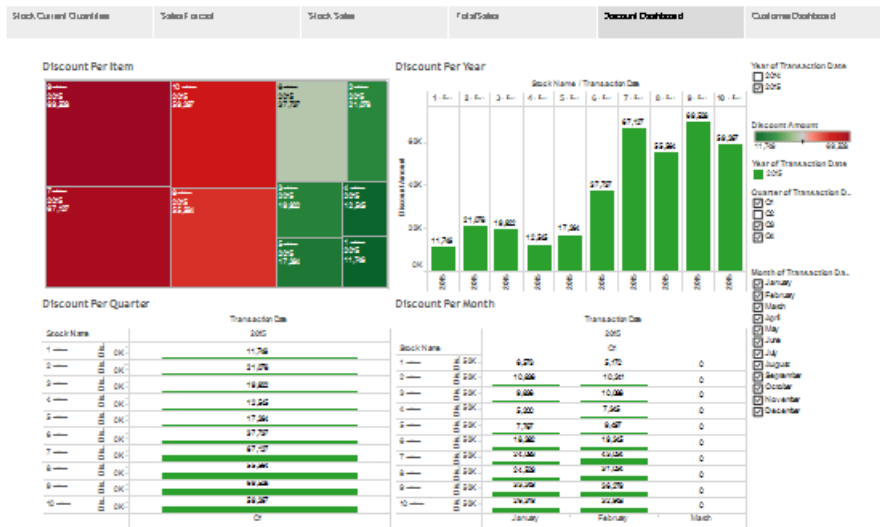

The processes, technologies and tools needed to turn data into information and information into knowledge and knowledge into plans that drive profitable business action.

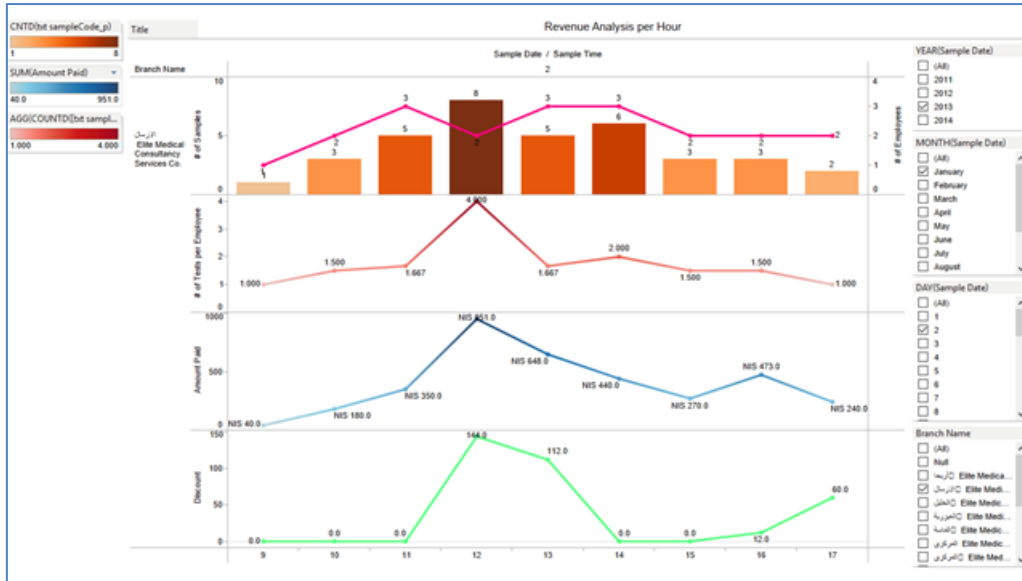

BI encompasses data warehousing, business analytics and knowledge management

Knowledge gained about a business through the use of various hardware/software technologies which enable organizations to turn data into information

Sales Dashboard

3. Hardware & Connectivity Requirements:

Although this is designed as a 3-tier solution, the hardware contains many client workstations connected to one server that hosts both the application and DBMS. The required hardware configuration is as follows:

The following is the minimum requirements for our software solution:

I. Hardware:

- Server: Brand name Dual-Core Intel Xeon
Processor: Intel Pentium IV.
Memory: 12 GB RAM minimum, 32 GB RAM recommended.
Space: Hard disk with 400 GB free Space.
Tape Drive.
CD-ROM Drive.
- Stations (client):
Processor: Intel Pentium III, recommended P4.
Memory: 4 MB RAM minimum .
Space: Hard disk with 50 MB free Space.
Network card.

II. Network: Local Area Network with 100MbP.

III. Software:

- DBMS: Oracle 10g or MS SQL server 2000 or later.

4. Main Customers:

We are proud to have customers in many countries like, Jordan, Iraq –Irbil , Bagdad, KSA, Sudan, and Dubai .

The below table summarizes some of our customers:

#	Customer Name	Country
1.	Engineers Association	Palestine
2.	Pallease Company	Palestine
3.	Pharamcare – Pharmaceutical factory	Palestine
4.	Modern Jerusalem for Left and Escalators Co.	Palestine
5.	International Elevators Group	Palestine
6.	Hadara Technology	Palestine
7.	Future Labs (KSA)	KSA
8.	Neworz Telecom Group -Irbil	Irbil
9.	FirstLine -Irbil	Irbil
10.	Quick Pay	Irbil
11.	Digital Future Co.	Irbil
12.	Connect Line Co	Irbil
13.	Itisuluna Co. Iraq	Bagdad
14.	Grand Stores	Dubai
